KA2: TRANSPARENCY IN EDUCATION

Adult Education School 'García Alíx' is a state school in Spain that promotes learning and transition between different levels and types of formal and non-formal education as well as the employability of our students through cooperation with institutions such as foundations, NGOs, companies and other educational institutions beyond our own.

We believe that one way to improve all these initiatives would be to encourage actions to promote transparency, to upgrade services together with the quality of information and guidance on skills, qualifications and learning outcomes, a process which aims to go beyond the school system using mechanisms of good governance in fields like accountability, academic information and the like, with the ultimate goal of reaching the people and involving them in the institution's life.

After a training period through a KA1 Erasmus+Project on the issue, we are heading for a KA2 in order to put our knowledge into practice focusing on the implementation and provision of qualitative tools for transparency and good governance for the improvement of educational quality throughout Europe.

For such an enterprise, we are looking for public or private institutions interested in working on the topic of transparency and good governance as related to education: Secondary, Adult or VET schools, prison education institutions, universities, NGOs, associations, local and regional authorities, principals and managing teams, etc.

Please, get in touch with:
